Extensibility AutoCAD includes a plugin architecture to allow third-party developers to implement their own custom plugins for use in AutoCAD. Because of the open standards approach taken by the Windows-based CAD suite, a wide variety of third-party plugins are available for Autodesk applications. The most popular of these, which complements the standard functionality built into AutoCAD, are custom commands. A custom command is a small script, or series of commands, that adds a function not already present in the standard interface. By far the most used of these is the customization of the default "help" menu. This is commonly used to create specific macros and is a popular way to write code for AutoCAD. Automation AutoCAD has built-in support for automation with its ObjectARX library. A macro is an executable series of commands that automate functions such as creating, deleting, moving, modifying, and displaying objects in a drawing. A macro can be

configured to run on multiple items or on a single item, or to repeat on subsequent items. A template is a macro that has been configured to repeat on subsequent items. A template is typically used for repetitive tasks such as adding a door, window, or kitchen cabinet to a series of drawings. Macros are commonly used for creating, moving, and modifying objects. Some more advanced macros perform calculations or generate text. The ObjectARX Library includes an object-oriented scripting environment to allow users to create and modify macros. Macros are written in LISP-like text-like statements, called templates, which are a collection of commands that perform a particular function. ObjectARX is an application programming interface (API) for developing and executing macros. ObjectARX consists of three main components: ObjectARX is the scripting language used in ObjectARX; it is similar to the BASIC programming language but has extensive object-oriented capabilities. The ObjectARX Runtime (ObjectARX Runtime (ORX)) is an intermediate-level scripting runtime developed and managed by the ObjectARX team. ORX is an implementation of the ObjectARX scripting language and a model of the ObjectARX scripting language. ObjectARX Database (ObjectARX Database (ODB)) is an ObjectARX data source and database manager, which connects to the ObjectARX runtime and exposes a database. The ObjectARX system includes a GUI called the ObjectARX GUI Editor (ObjectARX GUI Editor a1d647c40b

News TMC to distribute literature at event While the Marxist Center's primary purpose is to distribute its literature, it will make an appearance at the Travis Country Democratic Club's Black History Month event next month, continuing the group's effort to share its message with residents of the local community. "We've done this every year, and the turnout has been very good," said Mo Haslleh, the center's president. "We're hoping people come by because we have great literature." The Travis Country Democratic Club, in its first year of existence, will hold its Black History Month celebration at 6:30 p.m. on Feb. 21 at the Omni Hotel in Georgetown. Ebony Smith will be the keynote speaker, and Donna Bass, a Travis County resident and writer, will perform. A Travis County Democratic Party fundraiser will be held at the same time and place. The club's first-year board included several members from Travis County Democratic groups, including Zephyr Butler of the Travis County Democrats, the Travis County Democratic Women's Association and the Travis County Democratic Women's Progressive Caucus. Current board members include Tiffany Jones, Aubrey Carr, Melissa Gray and Bass, who is serving her second term as treasurer. "A lot of people are interested in supporting the county party," Bass said. "A lot of these people are new to politics. They're seeing the importance of getting involved." But there are also a few longtime Democrats who are interested in contributing to the party's coffers and the Black History Month event, she added. "There are a lot of them who are very supportive of the movement," Bass said. A number of Democratic clubs in Travis County have traditionally held these events in honor of Black History Month, but the county has never had a Black History Month fundraiser, Bass said. This year, the event is the brainchild of Harris County, which held a Black History Month fundraiser last year, and it was quickly embraced by the Travis County Democratic Club and its board members. "I think this is very exciting," Jones said. "
