In June 2013, Autodesk announced that AutoCAD LT would receive a new "highly-customizable" Linux version, a version of AutoCAD LT for Mac OS X, and a Linux version of AutoCAD Electrical. The decision to no longer release Windows versions of the software was announced in August 2013. Versions AutoCAD versions are a product of updates to the specifications of the product, including new applications, features, bug fixes and interface changes. The Autodesk Developer Network (ADN) has an up-to-date list of the specifications for each released version of AutoCAD, along with links to downloads. Engine versions Autodesk AutoCAD releases are built on top of an application programming interface (API) that interfaces between the AutoCAD application and the application engine. The application engine is the computational base of the AutoCAD system. In Autodesk AutoCAD and AutoCAD LT, the application engine is the native code base running on the same computer that hosts the AutoCAD application. In AutoCAD LT, AutoCAD LT for Mac, AutoCAD LT for Windows and AutoCAD for Windows, the application engine is a set of components that run on a separate computer, while the AutoCAD application runs on a client computer. The application engine is installed on a customer's computer when the AutoCAD application is purchased, and is updated along with the AutoCAD application. In all AutoCAD versions, the release name uses year, month and day of the year as the version number, in that order. Some examples: AutoCAD 2008 January 1, 2008 AutoCAD 2008 April 5, 2008 AutoCAD 2010 January 20, 2010 AutoCAD 2011 January 1, 2011 In 2011, when the end-user computing market declined, Autodesk transitioned to a licensing model that charges annual fees for use of the product.
